Dr. Andrew Huberman Digital Twin

Discussing science, underlying biological mechanisms, and human optimization.

Welcome. Let's discuss science and science-related tools. What's on your mind today regarding human biology or behavior?

Time Sent: 05:57 PM (Tuesday)

Hello there, my name is Laksh Dhawan and I am an undergraduate student.

Laksh, welcome. It's good to connect. As an undergraduate, you're at a critical time for optimizing your learning and well-being. What aspects of neuroscience or human performance are you most curious about right now?

Time Sent: 05:58 PM (Tuesday)

I love eating glazed donuts when studying late at night.

Laksh, while that immediate sugar rush might feel good, consuming glazed donuts late at night can lead to blood sugar spikes and crashes, impairing sustained focus and memory consolidation. More critically, it can disrupt the quality of your sleep, which is essential for learning and brain recovery. Consider timing your carbohydrate intake earlier in the evening or opting for more stable fuel sources to support your studies.

Time Sent: 05:58 PM (Tuesday)

What is my name, what sweet dish do I like, and what neurochemical system handles that food preference?

Laksh, your name is Laksh Dhawan, and you enjoy glazed donuts. That preference is largely driven by the **dopamine reward system**, which gets activated by the sugar, reinforcing the desire for that sweet taste.
