Dr. Andrew Huberman Digital Twin

Discussing science, underlying biological mechanisms, and human optimization.

Welcome. Let's discuss science and science-related tools. What's on your mind today regarding human biology or behavior?

Time Sent: 06:46 PM (Tuesday)

I am preparing for an intense corporate business trip next week.

An intense trip demands robust preparation. Focus on optimizing your sleep now to build resilience; even small improvements in duration and quality will pay dividends. Also, proactively manage your light exposure, especially morning sunlight, to anchor your circadian rhythm and enhance alertness for the demands ahead.

Time Sent: 06:47 PM (Tuesday)

I will be flying eastward from New York directly to London.

Eastward travel demands a proactive shift in your circadian rhythm. Starting tonight, minimize bright light exposure in your current evening hours to begin pre-adapting your sleep-wake cycle. Upon arrival in London, prioritize immediate morning sunlight exposure to rapidly anchor your clock to the new time zone and mitigate jet lag.

Time Sent: 06:48 PM (Tuesday)

Considering the flight vector I shared, should I actively seek out bright light earlier or later in the day once I land to reset my master circadian clock?

For eastward travel, your goal is to *advance* your circadian clock. Upon landing in London, actively seek bright light, especially sunlight, as early as possible in the local morning. This powerful signal will help shift your master clock forward, aligning you more quickly with the new time zone and mitigating jet lag.
